PROJECTS

• Fake News detection using regression model

Fake news detection using regression models involves training a model with labeled data to assign numerical scores to news articles indicating their likelihood of being fake or genuine. Features like content, source, author, and metadata are extracted and preprocessed.

• Design of MIMO Antenna for 5G Mobile application

MIMO (Multiple-Input Multiple-Output) antennas are crucial in 5G mobile applications. They use multiple antennas for simultaneous transmission and reception, boosting capacity and data rates. MIMO enables spatial diversity and interference cancellation, resulting in improved signal quality, and expanded network coverage.
